

Anigen Rapid Test Kit

Canine Parvovirus-Coronavirus Antigen Test Kit

Immunochromatographic test for the qualitative detection of canine parvovirus and coronavirus antigen in canine feces

Canine Parvovirus and Coronavirus cause sporadic outbreaks of vomiting and diarrhea in dogs, and are widely spread throughout the world. The rate of simultaneous infection of CPV and CCV is up to 25% of CPV infections (Evermann 1989,) and simultaneous infection is much more severe and fatal than a single infection. The clinical sign of CCV is usually mild enteritis and some deaths have been reported in young dogs. The clinical signs of CPV and CCV are very similar (diarrhea and vomiting) making it difficult to differentiate which virus is the causative agent by clinical signs alone.

Features of ANIGEN Rapid Test Kit:

- Highly purified antibodies produced by biotechnology for the detection and capture of canine parvovirus and coronavirus antigens
- Highly sensitive and specific
- Simple and easy to use
- Storage at room temperature
- Works with feces
- 2-year shelf life
- Small sample volume

Test Procedures:

U.S. Permit No. 544B; This product is protected by Patent No: U.S. 5,714,389 - U.S. 6,485, 982 B1
