

Nerfasin 100™

Xylazine injection - 100 mg/mL

DIN 02450240

Nerfasin 100™ should be used in horses when it is desirable to produce a state of sedation accompanied by a shorter period of analgesia.

Dosage and Administration:

Intravenously - 0.5 mL/45 kg body weight (Equivalent to 1.1 mg/kg or 0.5 mg/lb)
 Intramuscularly - 1.0 mL/45 kg body weight (Equivalent to 2.2 mg/kg or 1 mg/lb).
 Following injection of Nerfasin 100™, the animal should be allowed to rest quietly until the full effect has been reached. These dosages produce sedation which is usually maintained for 1 to 2 hours and analgesia which lasts for 15 to 30 minutes.

See package insert for full information on side effects, precautions, warnings and contraindications.

Storage: Store at room temperature, 15-30°C; Do not freeze. Store the vial in the upright position. Discard any remainder 28 days after broaching. The stopper should not be punctured more than 20 times after broaching.
